25X1

The GDYNIA-BARTIEDOLY (Q 55/Y 45) airfield is located about 3.5 miles north of GDYNIA (Q 55/Y 44), along the shore of the Zatocka Pucka. Between November 1946 and March 1947 German PWs did clearance work at the airfield and the adjacent destroyed former air force torpedo testing station. Destroyed trucks and aircraft were removed, caved-in hangars were stripped and the building material was salvaged. Since the airfield was always covered by snow it could not be observed whether a concrete runway was available.

Comment:                     

                     confirmed the above report stating that the P's also had to fill bomb craters.
